

## **Dexter Myers, Founder**

Mr. Myers, the founder of Pacific Engineering, has over 40 years of experience in program and project management, specializing in complex product design, fabrication, testing, and fielding projects. Throughout his career, he has successfully managed numerous Small Business Innovative Research (SBIR) Phase I, II, and III contracts and has overseen the growth of PEI from a two-person firm into a full-time engineering enterprise with state-of-the-art production facilities. Since PEI's inception, Mr. Myers has provided leadership and strategic direction, playing a key role in expanding the professional staff and enhancing the company's manufacturing capabilities. His strategic planning and project management expertise were instrumental in PEI receiving the 2014 Small Business Administration Roland Tibbetts Award for Excellence in Small Business Innovation Research. In addition to his leadership responsibilities, Mr. Myers serves as the capture manager for PEI contracts, developing strong working relationships with prime contractors. He is well-known and respected by senior leaders and program managers in the Department of Defense, the Small Business Administration, and the State of Nebraska for his advocacy of small business participation in the government sector. Mr. Myers studied Electrical Engineering at Howard University and is a graduate of the Executive Accelerator Program at the Joseph Business School in Chicago, IL. He is also a philanthropist, generously dedicating his time and resources to support community groups and organizations in Nebraska.
